Sitemap

Components

- Navigation bar

- Mobile Navigation bar

- Footer with professional social links

- Google Fonts

- Animated portfolio grid display

- Overflow scroll on pages that would normally be over 100vh
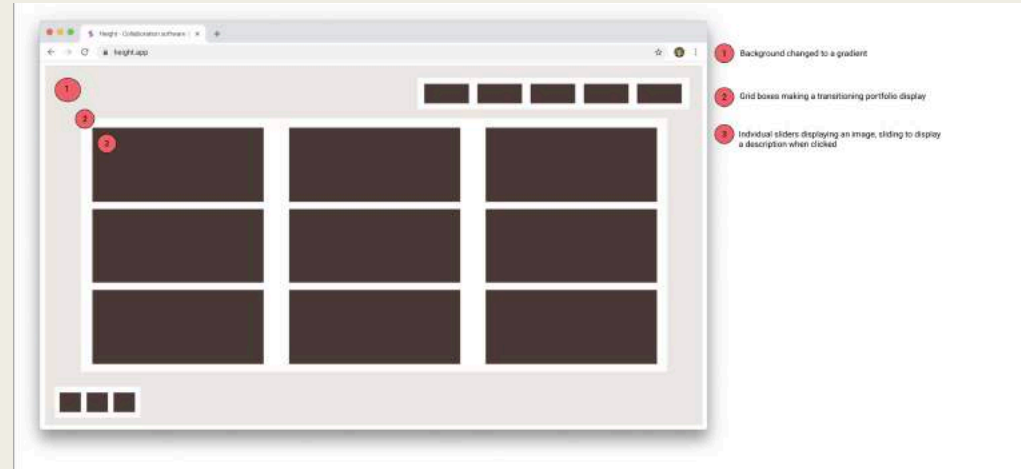

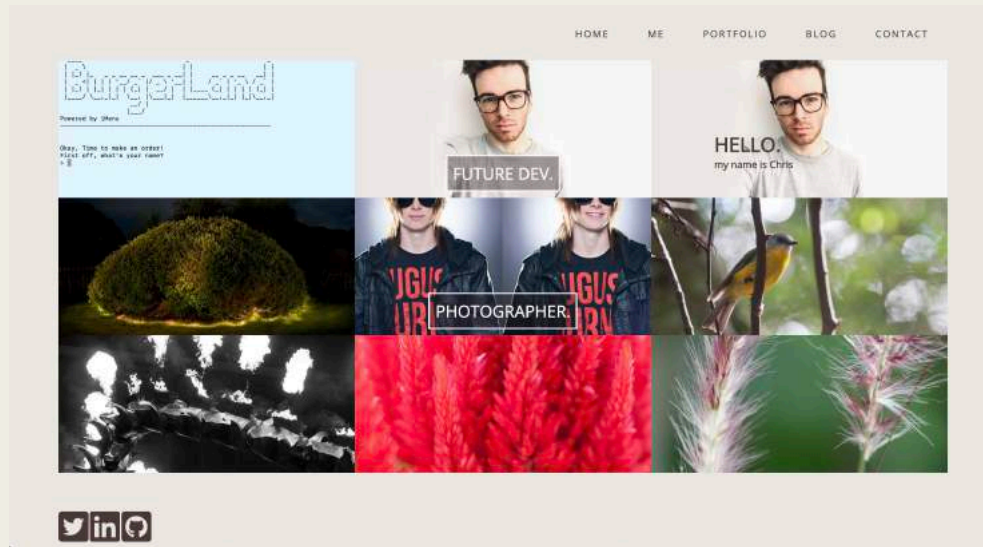

- Contact form

- Hovering text/Hero image
- Navigation Bar
- Footer

HOME PAGE

- Background image continues as main focus
- About me
- Resume download

ABOUT ME

- Grids on grids on grids

- Changeability and the future

- How?

PORTFOLIO

- Easy to read, continue my minimalistic theme

- 100vh overflow scroll - reasoning

BLOG

- Upon opening the page entering you into the first field

- Optionable input

- Borders for focus

- Formspree

CONTACT ME

- The challenge of mobile

- Broken website - made me 110% perfect every page

- Drop down menu

MOBILE

The grind

- Knowing the design I was going for early on definitely helped me not get too caught up in the small things

- I discovered I really did enjoy the front end design aspects of this and every time (sometimes when) you make an adjustment you get an instant result.

- Locking yourself to 100vh can cause you headaches, any time something didn't perfectly fit between those parameters my navbar, footer or something else would become pushed out.

- The hovering text also broke my page at least 50 times, but sticking to my guns made the finished product a much sweeter achievement.

- Responsiveness brings many problems but really makes you think about the design process in the future.
